SUMMARY

Entry-level cybersecurity candidate with hands-on experience in log analysis, phishing detection, and security monitoring. Familiar with SIEM tools like Splunk and Google Chronicle for analyzing security events. Skilled in identifying suspicious activities and understanding basic attack patterns. Strong foundation in networking and Linux systems. Seeking to start a career as a SOC Analyst (L1) or Cybersecurity Analyst.

EDUCATION

Charusat University <i>B.Tech (Information Technology)</i> CGPA 8.18	2022 – 2025 Anand, Gujarat
Marwadi University <i>Diploma (Computer Engineering)</i> CGPA 8.68	2019 – 2022 Rajkot, Gujarat
P. V. Modi School <i>10th (GSEB Board)</i> Percentage 73%	2018 – 2019 Rajkot, Gujarat

PROFESSIONAL EXPERIENCE

Ecosmob Technologies Pvt. Ltd. <i>Trainee Engineer</i> - Learning advanced Linux commands and system operations - Understanding the workflow of VoIP (Voice over IP) - Testing logs using Wireshark and VoIP Monitor for network analysis - Handling renewal and management of SSL certificates - Learning integration of NetSapiens and HoduPBX switches	04/2026 – Present Ahmedabad, Gujarat
Cybersecurity Virtual Experience (Forage) <i>Cybersecurity Simulation Participant</i> - Deloitte: Performed incident response and threat analysis for a simulated security breach. - Mastercard: Analyzed fraud detection patterns and identified risk indicators in financial transactions. - Commonwealth Bank: Monitored SOC dashboards to detect and escalate suspicious network activities.	04/2026 – 04/2026
Qrolic Technologies <i>Web Designer Intern</i> - Developed responsive web pages using HTML, CSS, and JavaScript - Worked on real client projects and improved website usability - Used WordPress and Elementor to design and customize websites - Collaborated on UI improvements and layout customization	01/2025 – 05/2025

SKILLS

Security & Tools

Splunk (Basic), Google Chronicle (Basic),
Wireshark, Nmap

Technical Skills

Python, SQL, Linux

Soft Skills

Adaptability, Time Management, Communication
(IELTS 7.5 Bands)

Networking

TCP/IP, DNS, Ports & Firewalls

PROJECTS

Log Analysis & Monitoring

- Analyzed system and network logs to identify failed login attempts and suspicious access patterns
- Identified patterns such as multiple failed login attempts indicating potential brute-force attacks
- Used Splunk and Google Chronicle (basic level) to monitor and investigate security events
- Correlated logs from multiple sources to detect unusual activity
- Documented findings and created structured reports for analysis

Phishing Analysis

- Analyzed phishing email samples to identify malicious links and suspicious content
- Extracted basic Indicators of Compromise (IoCs) such as URLs and sender anomalies
- Conducted a presentation on cybersecurity awareness and phishing attack techniques
- Demonstrated a controlled phishing simulation in a lab environment using Kali Linux tools
- Explained preventive measures and best practices to avoid phishing attacks

Linux Basics & Security

- Managed Linux system using CLI commands for file handling and user management
- Analyzed user permissions and access control concepts
- Configured basic firewall settings and monitored system activity
- Performed system updates and understood basic security practices
